**Full Prepared Statement Before The
U.S.-China Economic and Security Review Commission**

***Hearing on
Evaluating China's Past and Future Role in the World Trade Organization
Panel IV: Recommendations for Future U.S.-China Relations within the WTO***

Introduction

Members of the Commission, I am Terence P. Stewart, managing partner of Stewart and Stewart, an international trade law firm that has helped U.S. companies and workers compete in the international marketplace for more than 50 years. I appreciate the opportunity to testify before the Commission today on the future of the U.S.-China relationship within the WTO.

The Commission's Questions

For this hearing, the Commission has asked participants of this panel to address six questions that the Commission is particularly interested in exploring. My testimony will address each of these questions in turn.

The first question from the Commission is:

1. Has China's participation in the WTO led to meaningful market-oriented changes in Chinese economy?

The answer to this question is yes, with qualifications. Of course, since acceding to the WTO, China has made meaningful market-oriented changes to its economy by reforming its economic structure and enacting or revising its laws and regulations. All of these changes have been done to conform to WTO requirements and commitments and have helped fuel the rapid economic growth that China continues to experience and led to growth in trade volumes. Included as Attachments 1 and 2 to this statement are tables which look at Chinese imports and rate of growth before accession to the WTO and after for products from (1) the world, (2) the U.S. and (3) from all countries other than the U.S.

However, China's economic reforms are not complete, and China's entry into the WTO has not, by itself, corrected some serious and long-standing trade barriers and biases practiced by China which many WTO Members had hoped would be reformed when China joined the WTO.

In the past, my firm has had the privilege of preparing research reports for the Commission that examined the progress of China's compliance with its WTO obligations and commitments since its WTO accession.¹ In those reports, we took note of the many areas where China has met its WTO commitments by reforming its laws and modifying its economy to bring them into line with the requirements of the WTO agreements. We also took note of many areas where China had come up short in meeting its WTO obligations. Although China is now in the 9th year of its membership in the WTO, that basic theme continues today. In many areas, China continues to bring its laws and practices into compliance with the requirements of the WTO agreements. In many other areas, the United States and its trading partners continue to cite to Chinese policies and measures that are not in compliance with China's WTO obligations and commitments.

The U.S. Trade Representative's (USTR) 2009 report to Congress on China's WTO compliance identified numerous areas where China's compliance efforts have been over time, and still are, incomplete or unsatisfactory. The following is a list of areas where China's WTO compliance has been problematic.

- **Trading Rights:** "... one significant concern involves the right to import copyright-intensive products such as books, newspapers, journals, theatrical films, DVDs and music, which China still reserves for state trading."
- **Wholesaling Services:** China's regulations "do not remove significant restrictions on the distribution of copyright-intensive products such as books, newspapers, journals, theatrical films, DVDs and music. U.S. companies in some industries also have concerns about continuing restrictions on the distribution of other products, such as pharmaceuticals and crude oil and processed oil."
- **Retailing Services:** "...concerns remain with regard to licensing discrimination, restrictions related to urban commercial networks and restrictions on processed oil."
- **Direct Selling Services:** "...significant regulatory restrictions imposed on the operations of direct sellers continue to generate concern."
- **Tariff-rate Quotas on Industrial Products:** "Concerns about transparency and administrative guidance have plagued China's tariff-rate quota system for industrial products, particularly fertilizer, since China's accession to the WTO."
- **Export Regulation:** "China maintains numerous export restraints that raise serious concerns under WTO rules, including specific commitments that China made in its Protocol of Accession to the WTO."

Stewart, *Accession of the People's Republic of China to the World Trade Organization: Baseline of Commitments, Initial Implementation and Implications for U.S.-PRC Trade Relations and U.S. Security Interests*, A Report Prepared for the U.S.-China Security Review Commission, Washington, DC (April 30, 2002); Terence P. Stewart, *China's Compliance With World Trade Organization Obligations: A Review of China's 1st Two Years of Membership*, A Report Prepared for the U.S.-China Security and Economic Review Commission (March 19, 2004); Terence P. Stewart, *China in the WTO - Year 3*, A Report Prepared for the U.S.-China Economic and Security Review Commission (January 21, 2005); Terence P. Stewart, *China's Compliance With WTO Commitments and Obligations: 2005-2007 Update*, Trade Lawyers Advisory Group (September 2007).

- **Taxation:** “China has used its taxation system to discriminate against imports in certain sectors, raising concerns under WTO rules relating to national treatment.”
- **Subsidies:** “China continues to provide injurious subsidies to its domestic industries, and some of these subsidies appear to be prohibited under WTO rules. China has also failed to file annual WTO subsidy notifications since 2006, and its 2006 notification was incomplete.”²
- **Standards and Technical Regulations:** “China continues to pursue the development of unique Chinese national standards, despite the existence of well-established international standards, apparently as a means for protecting domestic companies from competing foreign technologies and standards.”
- **Conformity Assessment Procedures:** “China appears to be turning more and more to in-country testing for a broader range of products, which goes in the opposite direction of common international practices that generally accept foreign test results and conformity assessment certifications.”³
- **Transparency:** China “still does not appear to notify all new or revised standards, technical regulations and conformity assessment procedures as required by WTO rules.”
- **State-Owned and State-Invested Enterprises:** China “has heavily intervened in the investment decisions made by state-owned and state-invested enterprises in certain sectors.”
- **Government Procurement:** China “is maintaining and adopting government procurement measures that give domestic preferences.”
- **Investment:** “China revised many laws and regulations on foreign-invested enterprises to eliminate WTO-inconsistent requirements relating to export performance, local content, foreign exchange balancing and technology transfer, although some of the revised measures continue to ‘encourage’ one or more of those requirements. China has also issued industrial policies covering the auto and steel sectors that include guidelines that appear to conflict with its WTO obligations. In addition, China has added a variety of restrictions on investment that appear designed to shield inefficient or monopolistic Chinese enterprises from foreign competition.”
- **Tariff-rate Quotas on Bulk Agricultural Commodities:** China’s TRQ administration “still does not seem to be functioning entirely as envisioned in China’s WTO accession agreement, as it continues to be impaired by inadequate transparency.”
- **Sanitary and Phytosanitary Issues:** “In 2009, China’s regulatory authorities imposed non-transparent SPS measures that appear to lack scientific bases, including BSE-related bans on beef and some low-risk bovine products, pathogen standards and residue standards for raw meat and poultry products, Avian Influenza bans on poultry and H1N1-related bans on pork. Meanwhile,

² Since accession, China has submitted only one subsidies notification to the WTO Subsidies Committee. That was submitted in April 2006 and only after pressure from other WTO members. Although China identified more than 70 subsidy programs, it was incomplete in that it did not provide information on provincial and local government subsidies or subsidies provided by state-owned banks. This is a significant omission inasmuch as provincial and local governments are responsible for nearly 20% of China’s investment in industry and are key players in implementing China’s industrial policies. *See* USTR, 2009 Report to Congress on China’s WTO Compliance (December 2009) at 45.

³ *See also* USTR, 2010 Report on Technical Barriers to Trade at 69-75.

China has made progress but still does not appear to have notified all proposed SPS measures as required by WTO rules.”⁴

- **Agricultural Inspection-related Requirements:** “China’s regulatory authorities continue to administer inspection-related requirements in a seemingly arbitrary manner.”
- **Agricultural Export Subsidies:** “...China has not notified all of its subsidies to the WTO.”
- **Intellectual Property Rights:** “...reforms are needed in a few key areas, such as further improvement of China’s measures for copyright protection on the Internet following China’s accession to the WIPO Internet treaties and changes to address a number of continuing deficiencies in China’s criminal IPR enforcement measures. Effective IPR enforcement has not been achieved, and IPR infringement remains a serious problem throughout China. IPR enforcement is hampered by lack of coordination among Chinese government ministries and agencies, lack of training, resource constraints, lack of transparency in the enforcement process and its outcomes, and local protectionism and corruption.”
- **Banking Services:** “...there are some instances in which China still does not seem to have fully implemented particular commitments, such as with regard to Chinese-foreign joint banks and bank branches.”
- **Insurance Services:** Measures implementing China’s insurance commitments “have also created problems in the areas of licensing, branching and transparency.”
- **Electronic Payment Processing Services:** “It appears that China has not yet implemented electronic payment processing commitments that should have been phased in no later than December 11, 2006.”
- **Telecommunications Services:** “...restrictions maintained by China, such as informal bans on new entry, a requirement that foreign suppliers can only enter into joint ventures with state-owned enterprises and exceedingly high capital requirements for basic services as well as the reclassification of some value-added services as basic services, have created serious barriers to market entry.”
- **Construction/Engineering Services:** China’s measures implementing its construction and related engineering services commitments “are problematic because they also impose high capital requirements and other requirements that limit market access.”
- **Express Delivery Services:** “... China has issued a new law that undermines market access for foreign companies in the domestic express delivery sector and raises questions in light of China’s WTO obligations.”⁵

Moreover, at the recent 2010 Trade Policy Review of China, the United States noted that China’s progress toward greater market liberalization had slowed, that China in fact was moving backward by imposing restrictions on market access and foreign investment, and cited seven examples of China’s restrictive trend.

⁴ See also USTR, 2010 Report on Sanitary and Phytosanitary Measures at 32-37.

⁵ See USTR, 2009 Report to Congress on China’s WTO Compliance (December 2009) at 11-14 (Table 1 – summary analysis of China’s WTO compliance efforts).

By the time of China's Trade Policy Review in 2008, the United States noted evidence of a possible trend toward a more restrictive trade regime, citing several Chinese measures signaling new restrictions on market access and foreign investment in China. At the root of many of these problems was China's continued pursuit of problematic industrial policies that relied on excessive government intervention in the market through an array of trade-distorting measures designed to promote and protect domestic industries. This government intervention appeared to be a reflection of China's historic yet unfinished transition from a centrally planned economy to a free-market economy governed by rule of law.

Since China's Trade Policy Review in 2008, there is increasing evidence of such a restrictive trend. Examples from the past two years include: (1) the continued and incrementally more restrictive use of export quotas and export duties on a large number of raw material inputs; (2) the selective use of other border measures such as value-added tax rebates to encourage or discourage exports of particular products; (3) the setting and enforcement of unique Chinese national standards, such as an informal requirement that all new 3G mobile handsets be enabled with a unique Chinese national standard for wireless Internet access; (4) China's government procurement practices, including an array of new central, provincial and local government "Buy China" policies; (5) a new Postal Law that excludes foreign suppliers from a major segment of the domestic express delivery market; (6) impediments to the foreign supply of value-added telecommunications services and an informal ban on new entrants in China's basic telecommunications sector; and (7) continuing significant restrictions on foreign investment in China, along with continuing consideration of "national economic security" when evaluating foreign investment through mergers and acquisitions.

* * *

. . . In the United States' view, China has become much more focused on developing industrial policy initiatives aimed at helping Chinese enterprises move up the value chain in key industries, and China has demonstrated a highly selective interest in continuing to open its market more fully and fairly to foreign participation.

* * *

The United States recognizes the significant economic and social challenges that China faces. We also recognize the important contribution China's economic progress has been making to global growth and development. Nevertheless, the Chinese government's continued efforts to intervene in the economy and to direct the development of its domestic industries are generating increasing concern.⁶

As China becomes a more important actor on the world economic stage, it appears that China is pushing the envelope harder in order to promote its interests and deviate from or avoid meeting its WTO commitments. Thus, there is growing concern that China has not only slowed in its progress toward full WTO compliance, but has been backtracking on its commitments by taking actions that are driven increasingly by China's industrial policies regardless of whether they are

⁶ See Trade Policy Review of China, *Statement by Ambassador Michael Punke, U.S. Permanent Representative to the WTO*, Geneva, May 31, 2010, at 2-3. The EU representative expressed similar concerns in his statement. See Trade Policy Review of China, *European Union Opening Statement, Delivered by EU Head of Delegation, Mr. John Clarke*, Geneva, May 31, 2010.

inconsistent with WTO commitments or obligations. The Commission reflected this concern in its March 2009 hearing in which it addressed the issue of China's industrial policy and its efforts to promote pillar and strategic industries in order to create national "champions."

The USTR's 2009 report shows the wide range of trade issues where China continues to fall short of its WTO obligations. In the following, I highlight several concrete examples of China's WTO non-compliance and/or its promotion of "China first" industrial policy.

Export restraints on raw materials

In June 2009, the United States filed a formal request for consultations (WT/DS394) with China to address a variety of export restraints (*i.e.*, export quotas, export duties, and other restraints) that China imposes on various raw materials. A dispute panel was established in December 2009. The EC (WT/DS395) and Mexico (WT/DS398) have filed similar cases.

While China had modified its practices on some items ahead of the filing, the products of concern to the U.S. were various forms of the following nine raw materials: bauxite; coke; fluorspar; magnesium; manganese; silicon carbide; silicon metal; yellow phosphorus; and zinc. These are important inputs into various products including steel, aluminum and chemicals, and China is an important global producer of many of the products – producing 15% of the world's bauxite, 56% of the world's fluorspar, 84% of the world's magnesium, 45% of the world's silicon carbide, 58% of the world's silicon metal, 29% of the world's yellow phosphorus. Thus, efforts by China to reduce exports by quotas, export duties, export licensing, minimum export price requirements and other restrictions on some or all of these products are viewed by foreign competitors as creating twin artificial disadvantages for them. First, export taxes or other restrictions increase the cost of the materials to importing countries. Second, these restrictions reduce the cost of these materials to companies within China. This gives Chinese users of these inputs an artificial competitive advantage.

The U.S. identified thirty-two laws, regulations or other measures in China that impose restrictions on the export of the nine listed product categories and asserted that China's export restraints are inconsistent with certain WTO obligations (Articles VIII, X, and XI of GATT 1994) and commitments undertaken as part of China's accession (protocol and working party report).

The case raises a number of important issues in how the multilateral trading system will function moving forward. Beggar-thy-neighbor policies in the area of raw materials, if not checked, have potentially devastating consequences for global commerce moving forward, as a race to lock up and restrict resources would be the obvious likely outcome. Actions by China appear to be highly mercantilist in intent and are clearly distortive of global trade flows. If China's actions are, as seems likely, part of a conscious policy to give domestic producers artificial competitive advantages, then we will not likely see a rapid resolution of the dispute.

In addition, it should be noted that the WTO Secretariat, in the 2010 Trade Policy Review of China, criticized China's use of export restraints in general and refuted China's stated rationales for using them, as follows:

{W}hether intended or not, export restraints for whatever reason tend to reduce export volumes of the targeted products and divert supplies to the domestic

market, leading to a downward pressure on the domestic prices of these products. The resulting gap between domestic prices and world prices constitutes implicit assistance to domestic downstream processors of the targeted products and thus provides them a competitive advantage. Insofar as China is a major supplier of such a product, export restraints may also shift the terms of trade in China's favour. Also, some export restrictions might be imposed to pre-empt imposition of import restrictions by governments in export markets.

More generally, export restraints may not be the best way to achieve some of the objectives/rationales mentioned above. In particular, restricting the export of some highly polluting or high-energy consuming products is not the most economically efficient way to protect the environment or reduce energy consumption. Nor are export restraints the best way to conserve natural resources. China is starting to consider more suitable internal (rather than trade) measures to achieve these objectives. Although the Government increased its export restrictions on rare earth by, for example cutting export quotas or increasing export taxes, it has imposed domestic production caps on rare earth and is considering levying an environmental tax on the production/extraction of natural resources during the 12th Five-Year period (2011-15), with a view to preserving non-recyclable natural resources and protecting the environment.⁷

Indigenous innovation policies

China's indigenous innovation policies is a clear example of China's attempts to promote industrial policies that favor Chinese industries while at the same time limiting market access for foreign-origin goods and service providers.

In December 2007, China issued a measure aimed at limiting government procurement of "indigenous innovative" products to "Chinese" products manufactured within China. Subsequently, in November 2009, China issued a circular identifying the eligible products and the criteria for being accredited as a national indigenous innovation product. Such accreditation would give preferential treatment in government procurement to that product. The eligible products areas are: computer and application devices; communication products; modernized office equipment; software; "new energy and equipment"; and energy-efficient products. Several provisions of the circular were problematic. The circular provided that to qualify as an indigenous innovation product, the product's intellectual property must have been registered originally in China. The same "first registration in China" requirement also applied to the product's trademarks and brands. In addition, the circular required that a product must have highly advanced technology that equals or exceeds international standards.

The United States has expressed serious concerns to China about this measure, as it appeared, among other things, to be discriminatory, limit market access for foreign companies, and interfere with the exercise of IP rights. At the recent 2010 Trade Policy Review of China, the U.S. stated:

At present, the industrial policies generating the most controversy are China's so-called "indigenous innovation" policies. Over time, it has become evident that many of these programs contain elements that could discriminate against foreign

⁷ See Trade Policy Review of China, *Report of the Secretariat*, WT/TPR/S/230 (26 April 2010) at 44.

products, foreign investors, foreign technology and/or foreign intellectual property. Recent measures have generated intense concern among WTO Members and their business communities by more concretely demonstrating a policy direction that seems designed to limit market access for imports and foreign investors and pressure enterprises to localize research and development in China, as well as transfer technologies.⁸

In April 2010, China revised its accreditation circular to address some of the concerns raised by the U.S. and others. In the revised circular, China relaxed the IP, trademark and brands “first registration in China” requirement, and changed the highly advanced technology requirement to requiring that a product be proven effective in conserving energy, reducing pollution, and/or raising energy-efficiency, or “substantially” improve on an original product’s structure, quality, material, craftsmanship, or performance.⁹ These changes, however, have not alleviated the concerns about this measure.

At the most recent Strategic and Economic Dialogue (S&ED) held in Beijing in May 2010, the fact sheet released by the U.S. government seemed to indicate that progress had been made on this issue.

**Ensuring that innovation policies encourage the
the best ideas wherever they originate.**

- China and the United States committed to innovation policies consistent with strong principles, including nondiscrimination, intellectual property rights protection, market competition, and no government interference in technology transfer.
- China agreed to launch expert and high-level bilateral innovation discussions with all relevant U.S. and Chinese agencies and to take into account the results of these discussions in formulating and implementing its innovation measures.
- China removed troubling elements of its product accreditation circular following extensive engagement with the U.S. government and business community and has delayed implementation to assess public comments.¹⁰

Despite this statement, China’s indigenous innovation policy is likely to be a continuing issue of dispute into the future. Indeed, following the S&ED, Under Secretary of Commerce for International Trade Francisco Sanchez stated that “China did not agree to a U.S. request to suspend its indigenous innovation policy” made at the S&ED, although China “did agree to provide additional time for U.S. industry and government comments on how it could achieve its goal of promoting innovation in China without discriminating against foreign companies.”¹¹

¹¹ See Inside U.S. Trade, World Trade Online, *Sanchez Says China Rebuffed U.S. Request for Indigenous Innovation Delay*, June 4, 2010.

Export requirements tied to investment

As part of its accession, China committed that it would comply with the TRIMs Agreement and eliminate, and cease to enforce, export performance requirements, including in contracts imposing such requirements.¹² However, despite clear obligations by China to eliminate export requirements as part of investment or licensing systems for producers, the International Trade Commission's public report in the Section 421 Passenger Tires from China investigation showed that China has not eliminated, but continues to allow, mandatory export requirements for companies investing in China, skewing pressures on trading partners as investment in China is not allowed to service the domestic market but must, for an extended period of time, be used to flood export channels. In that 421 case, one company in particular, Cooper Tire & Rubber, revealed that it was required to export all tires produced by its production facilities in China for five years:

Cooper Tire & Rubber, which is both a domestic producer of subject tires and an importer of subject tires from China, takes no position regarding petitioner's remedy. Cooper recommends, however, that any quota be managed by the U.S. government, such as through a licensing or visa system. Cooper explains that it is concerned about how a quota would be administered procedurally because its business license for its Kushan plant in China requires Cooper to export all the tires produced in the plant during the first five years; production at the plant began in February 2008. Final comments of Cooper Tire & Rubber at 2-3.¹³

The Company has entered into a joint venture with Kenda Tire Company to construct and operate a tire manufacturing facility in China which was completed and began production in 2007. Until May 2012, all of the tires produced by this joint venture are required to be exported and sold by Cooper Tire & Rubber Company and its affiliates.¹⁴

This is a concrete example of a violation of China's obligations under the TRIMs Agreement and its accession commitments (protocol and working party report) to eliminate export performance requirements tied to investment.

In the most recent Transitional Review Mechanism (TRM), China maintained that it had faithfully honored its commitments "in respect of the TRIMs Agreement as found in paragraph 7.3 of the Accession Protocol of China, more specifically those commitments on such performance requirements as local content, offsets, the transfer of technology, export performance or the conduct of research and development, etc."¹⁵ Interestingly, however, China

¹² See Protocol on the Accession of the People's Republic of China, WT/L/432 (23 November 2001) at Part I, item 7, para. 3; Report of the Working Party on the Accession of China, WT/MIN(01)/3 (10 November 2001) at section IV.D.5, para. 203.

¹³ *Certain Passenger Vehicle and Light Truck Tires from China*, Investigation No. TA-421-7, USITC Publ. 4085 at 34 n. 190 (July 2009).

¹⁴ Cooper Tire & Rubber Company, 2008 10 K at 40.

¹⁵ See Transitional Review Mechanism Pursuant to Paragraph 18 of the Protocol of Accession of the People's Republic of China to the World Trade Organization, *Report of the Chairman*, G/L/899 (23 October 2009) at Annex 1, para. 16.

“clarified that while China's commitment was that the approval for the right of importation or investment was not conditioned on performance requirements including the transfer of technology, it nevertheless would not stop the parties to a joint venture contract from negotiating provisions on technology transfers according to their own wish.”¹⁶

The United States did bring two WTO cases against China which involved, in part, export performance requirements. In the first case, the U.S. claimed that certain measures granting refunds, reductions, or exemptions from taxes or other payments otherwise due to the Chinese government by enterprises in China appeared to be provided on the condition that those enterprises purchase domestic over imported goods, or on the condition that those enterprises meet certain export performance criteria, a violation *inter alia* of Article 2 of the TRIMs Agreement.¹⁷ In this case, the U.S. and China reached a settlement in the form of a Memorandum of Understanding, with China agreeing to repeal the measures at issue.¹⁸

In the second case, involving subsidies provided to China's “famous brand” products, the U.S. claimed that certain measures offering grants, loans, and other incentives to enterprises in China appeared to be provided on the condition that those enterprises meet certain export performance criteria.¹⁹ As such, the U.S. claimed that the challenged measures qualified as prohibited export subsidies. As in the first case, the U.S. and China reached a settlement in this dispute, with China agreeing “either to eliminate the measures of concern or to modify them to remove any provisions related to export-contingent brand designations and financial benefits.”²⁰

Tit-for-tat retaliation

Finally, I would like to note one practice of China that I believe is not in keeping with the integrity of the rules-based trading system. That practice is China's tendency to retaliate against a Member who has issued a trade measure (*e.g.*, antidumping or countervailing duty order) against a Chinese product, regardless of whether the retaliatory measure has any *prima facie* merit. For example, in September 2009, the United States imposed a Section 421 safeguard measure (a transitional product-specific safeguard mechanism authorized by item 16 of the accession protocol) on passenger tires from China. Within days thereafter, China announced that it was launching antidumping and countervailing duty investigations into chicken products imported from the United States and a countervailing duty investigation into automobiles imported from the United States. At the time, it was questioned whether China's action was

¹⁶ See Transitional Review Mechanism Pursuant to Paragraph 18 of the Protocol of Accession of the People's Republic of China to the World Trade Organization, *Report of the Chairman*, G/L/899 (23 October 2009) at Annex 1, para. 18.

¹⁷ See China – Certain Measures Granting Refunds, Reductions or Exemptions from Taxes and Other Payments, *Request for Consultations by the United States*, WT/DS358/1, G/L/813, G/SCM/D74/1, G/TRIMS/D/25 (7 February 2007).

¹⁸ See China – Certain Measures Granting Refunds, Reductions or Exemptions from Taxes and Other Payments, *Communication from China and the United States*, WT/DS358/14 (4 January 2008).

¹⁹ See China – Grants, Loans and Other Incentives, *Request for Consultations by the United States*, WT/DS387/1, G/L/879, G/SCM/D81/1, G/AG/GEN/79 (7 January 2009).

²⁰ See USTR press release, *United States Wins End to China's “Famous Brand” Subsidies After Challenge at WTO; Agreement Levels Playing Field for American Workers in Every Manufacturing Sector*, December 18, 2009.

simple retaliation rather than meritorious investigations. For example, the *People's Daily Online* noted:

China's move to launch anti-dumping and anti-subsidy probes into imports of U.S. chicken products and vehicles was "based on the facts," Ministry of Commerce Spokesman Yao Jian said Tuesday.

When asked if China's investigation was a retaliatory move because of the dispute over tire tariffs imposed earlier by the United States, Yao said at a press conference the investigation was in accordance with the country's anti-dumping and anti-subsidy regulations, and based on facts.²¹

And *Inside US-China Trade* noted:

A Chinese trade official on Sept. 14 declined to explicitly link China's decision to initiate antidumping cases on poultry and automotive products to the U.S. decision to impose the tires safeguard, but made clear that Chinese trade policymakers did want to signal their U.S. counterparts that "for every job you save, you risk losing five more."²²

On its face, a comparison of U.S. auto exports to China and the Chinese auto market indicates that the likelihood that the Chinese auto industry has suffered any injury from subsidized U.S. auto imports is highly implausible. In 2009, China produced 13.6 million autos, while the U.S. exported only 32,000 motor vehicles to China – 0.2% of Chinese production.²³

One aspect of China's retaliation tendency is that it is authorized by Article 56 of its antidumping law, which states:

Article 56 Where any country (region) discriminatorily applies anti-dumping measures on the exports from the People's Republic of China, the People's Republic of China may, on the basis of the actual situations, take corresponding measures against that country (region).²⁴

This provision is currently being challenged by the European Union ("EU") in a WTO dispute proceeding. The EU asserts that Article 56 is inconsistent with China's obligations under the Antidumping Agreement, the Dispute Settlement Understanding (DSU) and the GATT 1994. Specifically, the EU claims that Article 56 is inconsistent with ADA art. 18.1 (no specific action against dumping allowed except in accordance with GATT 1994, as interpreted by the ADA); DSU art. 23 (fails to abide by the rules and procedures of the DSU); GATT 1994 art. I:1 (violates

Trade data from the U.S. International Commission DataWeb show that the U.S. exported 31,876 motor cars and other motor vehicles (excluding snow mobiles, golf carts, mobile homes, and ambulances) to China in 2009.

²⁴ See *Regulation of the People's Republic of China on Anti-Dumping*, G/ADP/N/1/CHN/2/Suppl.3 (20 October 2004).

national treatment obligation); and GATT 1994 Article X:3(a) (violates obligation to administer rulings in a uniform, impartial and reasonable manner).²⁵

The second question from the Commission is:

2. Should the United States bring more WTO cases, and if so in what areas?

The answer is yes, the United States should bring more WTO cases where China's actions and measures are inconsistent with its WTO commitments and obligations, discriminate against U.S. exporters and U.S. companies operating in China, and/or provide an unfair competitive advantage to imports from China. But as is always the case, the Administration must evaluate whether a formal challenge or other approach will lead to a quicker resolution.

Given their rapidly expanding trade relationship, periodic trade disputes between the U.S. and China are inevitable. Although the number of disputes has grown as the size and complexity of the relationship has increased, the U.S. and China have tried to use a variety of approaches, both formal and informal, to resolve problems. The U.S. and China address bilateral concerns through high level and lower level governmental exchanges (*e.g.*, the Joint Commission on Commerce and Trade and the Strategic and Economic Dialogue), through the provision of technical assistance where relevant, and through other means.

To the extent that bilateral disputes can be resolved through informal discussions, that, of course, is the most cost-effective and timely method. Resort to WTO dispute settlement should be the last step to resolve a trade dispute, not the first. But there is a core need to rebalance the U.S.-China economic relationship. Part of that rebalancing consists of better adherence by China to the obligations and commitments it assumed when it joined the WTO. Part of the answer for a rebalanced economic relationship flows out of institutional issues that discriminate against the U.S. system (*e.g.*, the difference in treatment of direct and indirect taxes within the WTO). Trade disputes can help resolve problems not addressable through consultations. Certainly, there is a need to pick up the pace of resolution where there continue to be problems.

Where bilateral resolution of trade conflicts has not been possible through informal or formal processes, both the U.S. and China have resorted to the WTO. To date, the U.S. has filed 8 cases against China (*see Appendix at end of testimony*), and China has filed 5 cases against the U.S.

Of the 8 cases brought by the U.S., most have had similar complaints filed by one or more WTO Members. Seven cases have been resolved either through an agreed solution (*e.g.*, semiconductors; 2 cases alleging a variety of prohibited subsidies; financial information services) or through panel or Appellate Body decisions finding some aspects of China's laws, regulations or practices inconsistent with WTO obligations.

²⁵ See China – Provisional Anti-Dumping Duties on Certain Iron and Steel Fasteners from the European Union, *Request for Consultations by the European Union*, WT/DS407/1, G/L/920, G/ADP/D83/1 (12 May 2010) at 3.

One active case -- export restrictions on various raw materials -- is in its early stages. A panel was established at the December 2009 DSB meeting, and a panel decision by the end of 2010 or early next year is possible.

As to the areas of U.S.-China trade disputes that are most ripe for WTO adjudication, many of the issues discussed above in response to Question 1, which have been the focus of continuing concern over a number of years, would be likely candidates. For purposes of this hearing, however, I will cite some examples of problems being faced by many sectors of the economy desirous of doing business in China where a WTO challenge may be warranted.

(a) Broad-based challenge to export duties, export taxes, and other export restraints

One obvious candidate for a WTO case is China's flouting of its Protocol obligations on export taxes. The Protocol of Accession limits products to which China can impose an export tax to 84 Harmonized System (HS) items and identifies the maximum export tax.²⁶ China's 2010 list of products subject to export taxes lists 329 HS categories.²⁷ Moreover, some of the products listed, although part of the 84 permitted, are at rates above the maximum rate authorized. These are input materials by and large. The U.S., the EU and Mexico have challenged a handful of the export restraints and those cases are currently in the early stages of panel activity.²⁸ Nonetheless, as the export restraint policies are at the heart of many of the industrial policies that aim to force investment to shift to China or to otherwise distort trade flows to the advantage of domestic producers, the U.S. should bring a broad-based case against all of the export duty and other export restraints imposed that are not covered in the first case.

Alternatively, one could do cases on other subsets of products affected. For example, export restraints on rare earth minerals would be a prime target for a WTO case. Rare earth minerals are important and essential raw materials used in critical applications ranging from defense systems (e.g., precision-guided munitions), to hybrid electric motors and batteries, cell phones, computer hard drives, energy efficient light bulbs, wind-power turbines, and fiber optics, amongst others. In the past, the United States had a fully integrated industry to mine rare earth minerals and convert them to oxides, metals, alloys, semifinished products and finished components, and supplied close to 100% of rare earth minerals to global markets. That is no longer the case. Currently, China supplies more than 90% of rare earth minerals and processed products.

In recent years, through restrictive actions such as export taxes, export quotas and licensing, China has started to limit access to rare earth minerals and downstream products. The intent of China's rare earth minerals policy appears to be to raise prices outside of China by reducing

²⁶ See Protocol on the Accession of the People's Republic of China, WT/L/432, Annex 6 (23 November 2001).

[2009] No. 28, December 8, 2009 (attachment contains China's export duty rate chart for 2010). This chart is attached as Exhibit 1 to Hearing on "Rare Earth Minerals and 21st Century Industry", U.S. House of Representatives Committee on Science and Technology, Subcommittee on Investigations and Oversight, Testimony of Terence P. Stewart, Managing Partner, Law Offices of Stewart and Stewart (March 16, 2010); <http://www.stewartlaw.com/stewartandstewart/Portals/1/Douments/3-16-2010.pdf>.

²⁸ See Note by the Secretariat re Constitution of the Panel Established at the Requests of the United States, the European Communities, and Mexico, *China — Raw Materials Exports*, WT/DS394/8, WT/DS395/8, WT/DS398/7 (March 30, 2010).

global supply, to encourage foreign investors to move production and investment to China, and to ensure low-priced supplies for targeted, rapid growth sectors within China. According to the 2009 U.S.-China Economic and Security Review Commission Annual Report to Congress, China is targeting rare earth dependent components of key strategic industries for production within China including green technologies such as hybrid car batteries and the special magnets used in wind turbines.²⁹ And, on June 2, 2010, the New York Times reported that the “State Council, China’s highest legislative body, is weighing a proposal to put the government in control of private and unauthorized mines that produce rare earth minerals,” a move that would “tighten its control over its rare earth minerals by allowing just a handful of state companies to oversee the mining of the scarce elements, which are vital to some of the world’s greenest technologies.”³⁰ The story noted that although “some governments and global companies have recently expressed concern about whether China is planning to restrict exports of its rare earth minerals or force global companies to move factories to China to complete production of items using the minerals,” the ostensible reason for the proposal was “because the mining of rare earth minerals has led to environmental ruin and chaotic development,” and the Chinese government wants a higher price on its rare earth minerals so that foreign companies will share the environmental costs.³¹

As noted above, in 2009, the United States filed a WTO case against China’s export restraints on numerous raw materials critical to U.S. manufacturers and workers. China’s export restraint policy and actions on rare earth minerals is similar to China’s export restraint policy and actions on the raw materials that are the subject of the ongoing WTO challenge. Given this similarity, the United States and its trading partners could bring an additional WTO challenge against China’s export restraints on rare earth minerals. These restraints are clear violations of obligations China undertook upon accession to the WTO in 2001.

(b) Currency misalignment

There are viable claims that the United States could make to challenge China’s unfair currency practices through the WTO dispute settlement system. The United States need not wait for a formal determination from the International Monetary Fund that China is manipulating its currency before bringing a WTO case. If a WTO challenge were successful, the U.S. could ultimately be authorized to raise tariffs or take other retaliatory measures unless China brought its currency practices into compliance with WTO rules.

The potential bases for challenging China's exchange rate policy are that the undervaluation of China's currency (1) constitutes a prohibited export subsidy within the meaning of various GATT articles and WTO Agreements, (2) violates GATT Article XV:4, (3) violates GATT Article II:3, (3) violates China’s obligations under the International Monetary Fund’s Articles of Agreement, and (5) nullifies and impairs benefits accruing to the United States. These grounds are briefly described below.

²⁹ 2009 Report to Congress of the U.S.-China Economic And Security Review Commission (November 2009) at 63.

³⁰ The New York Times, *China Weighs Tighter Controls on Rare Elements* (June 2, 2010); <http://www.nytimes.com/2010/06/03/business/energy-environment/03rare.html>.

³¹ *Id.*

(1) Prohibited Export Subsidy

- *WTO SCM Agreement*: Article 3.1(a) of the SCM Agreement prohibits “subsidies, contingent in law or in fact, ... upon export performance....” Article 3.2 of the SCM Agreement states that WTO Members States “shall neither grant nor maintain” prohibited export subsidies. In its accession protocol, China committed to “eliminate all subsidy programmes falling within the scope of Article 3 of the SCM Agreement upon accession.”³²
- *GATT Article VI*: The *Ad Note* to GATT Articles VI:2 and VI:3 provides that “multiple currency practices can in certain circumstances constitute a subsidy to exports which may be met by countervailing duties By ‘multiple currency practices’ is meant practices by governments or sanctioned by governments.” GATT, *Ad. Article VI*, paras. 2-3, note 2.
- *GATT Article XVI*: This article expressly recognizes that export subsidies “... may cause undue disturbance to ... normal commercial interests, and may hinder the achievement of the objectives of this Agreement.” GATT Article XVI:2. Paragraph 4 prohibits export subsidies by directing that “contracting parties shall cease to grant either directly or indirectly any form of subsidy on the export of any product other than a primary product which subsidy results in the sale of such product for export at a price lower than the comparable price charged for the like product to buyers in the domestic market.” GATT Article XVI:4.
- *WTO Agriculture Agreement*: According to Article 3.2 of the Agriculture Agreement, Members shall not provide export subsidies in excess of those specified in their schedule of commitments. Article 9.1 identifies specific types of export subsidies subject to reduction commitments, and Article 10.1 further specifies that export subsidies not identified in Article 9.1 shall not be applied in contravention of Members’ export subsidy commitments. In the working party report to China’s accession, China expressly committed that “by the date of accession, China would not maintain or introduce any export subsidies on agricultural products.”³³

(2) Violation of GATT Article XV:4

- GATT Article XV:4 states: “Contracting parties shall not, by exchange action, frustrate* the intent of the provisions of this Agreement, nor, by trade action, the intent of the provisions of the Articles of Agreement of the International Monetary Fund.”³⁴ China’s currency undervaluation constitutes an “exchange action” that frustrates the intent of various provisions of the GATT

³² Protocol on the Accession of the People’s Republic of China, WT/L/432, art. 10.3 (23 November 2001).

³³ Report of the Working Party on the Accession of China, WT/MIN(01)/3, para. 234 (10 November 2001).

³⁴ The *Ad Note* states: “The word ‘frustrate’ is intended to indicate, for example, that infringements of the letter of any Article of this Agreement by exchange action shall not be regarded as a violation of that Article if, in practice, there is no appreciable departure from the intent of the Article....”

Agreement, particularly Article I (MFN), Article II (tariff bindings), Article III (national treatment), Articles VI and XVI (export subsidies prohibited), and Article XI (bars taxes & charges (other than duties) that restrict imports).

- China's undervaluation also constitutes a "trade action" that frustrates the intent of the IMF's Articles of Agreement, particularly Article IV, Section 1(iii) (each IMF member shall "avoid manipulating exchange rates or the international monetary system in order to prevent effective balance of payments adjustment or to gain an unfair competitive advantage over other members.").

(3) Violation of GATT Article II:3

- If China has altered the method by which it converts its currency in a manner which impairs the value of the tariff concessions contained in its schedule, the measure may violate Article II:3 of the GATT 1994.

(4) IMF Agreement Violation

- China's currency undervaluation violates China's obligations under IMF Article IV (each IMF Member shall: "(iii) avoid manipulating exchange rates or the international monetary system in order to . . . gain an unfair competitive advantage over other members") by giving China's exports an unfair competitive advantage in trade with the U.S. and other IMF Members.
- China's currency undervaluation violates China's obligations under IMF Article VIII, section 3 ("No member shall engage in, or permit any of its fiscal agencies ... to engage in any discriminatory currency arrangements or multiple currency practices") by discriminating against U.S. products to China's benefit.

(5) Nullification and Impairment

- Even if China's exchange rate policies are found not to directly violate any WTO provisions, they may nullify and impair benefits accruing to the U.S. under the agreements and thus be subject to a dispute settlement claim under Article XXIII of the GATT 1994 and Article 26 of the Dispute Settlement Understanding.

The WTO and IMF are part of a coherent, rules-based system that was designed to prevent and redress exactly the type of trade-distorting currency practices that China is currently engaged in. Those rules can and should be employed to their fullest extent to achieve effective relief for American industries, farmers, workers, and communities.

(c) Violation of TRIMs obligations

Another example would be cases involving violations of trade-related investment measures ("TRIMs") obligations. One of the big concerns of manufacturers before accession was that China's policies of forcing foreign-invested companies to agree to export some portion of production for a period of time would be continued after accession. While China's accession

requires the elimination of these practices, it is widely acknowledged that such practices continue. Indeed, in the recent 421 case on passenger car and light truck tires from China, an annual report for one of the U.S. producers included information that a new joint venture in China had a requirement to export 100% of production for five years. While many companies who accept these obligations are hesitant to acknowledge the WTO-inconsistent obligation accepted, the U.S. should pursue aggressively any instances where public information confirms the existence of such WTO-inconsistent obligations.

(d) SPS and TBT violations

The new USTR reports on Sanitary and Phytosanitary Measures (SPS)³⁵ and Technical Barriers to Trade (TBT)³⁶ barriers identifies problems being encountered by U.S. companies in China (and in other countries). These reports provide the U.S. with a roadmap of practices that could be reviewed for consistency with WTO obligations and pursued where appropriate. For example, USTR has identified a variety of measures that pose barriers to U.S. agricultural exports that may violate China's WTO obligations. These include labeling and approval requirements for biotechnology products, burdensome registration and packaging regulations for importers of food products, animal feeds, and other agricultural goods, and total or partial bans on imports of certain beef and pork products, poultry and apples from certain U.S. states, and potatoes and strawberries from the entire U.S. In many cases these measures are more stringent than international SPS standards and not supported by adequate risk assessments.

(e) Civil and military aircraft industry (subsidies, technology transfer, national treatment)

The Commission's hearing last month on the civil and military aircraft industry in China revealed issues of potential WTO concern. Ms. Mary H. Saunders, Deputy Assistance Secretary of Commerce for Manufacturing and Services at the U.S. Department of Commerce, noted that foreign companies cannot own Chinese airline manufacturers and must have a joint venture which includes a technology transfer agreement and also noted a myriad of support programs.³⁷ Commerce is reviewing available information looking for potential WTO violations. Technology transfer agreements and the support programs may all be challengeable within the WTO.

(f) Technology transfer obligations

In September 2007, my firm prepared a study entitled "China's Laws, Regulations and Practices in the Areas of Technology Transfer, Trade-Related Investment Measures, Subsidies and Intellectual Property Protection Which Raise WTO Compliance Concerns." This study identified a number of areas where additional WTO challenges could be brought. Some of the issues have seen progress (*e.g.*, increased criminal prosecutions for intellectual property right

³⁵ See USTR, 2010 Report on Sanitary and Phytosanitary Measures at 32-37.

³⁶ See USTR, 2010 Report on Technical Barriers to Trade at 69-75.

³⁷ See U.S.-China Economic and Security Review Commission, Hearing on "China's Emergent Military Aerospace and Commercial Aviation Capabilities," Statement of Ms. Mary H. Saunders, Deputy Assistant Secretary of Commerce for Manufacturing and Services, U.S. Department of Commerce, May 20, 2010; http://www.uscc.gov/hearings/2010hearings/written_testimonies/10_05_20_wrt/10_05_20_saunders_statement.pdf.

infringements and amending certain Chinese IP laws in response to WTO dispute settlement rulings)³⁸ but the challenge of technology transfer obligations is widespread (not limited to aircraft manufacturing) and appear to be clear violations of Section 7.3 of the Protocol of Accession.³⁹

The third question from the Commission is:

3. Should the United States push for reform to the WTO dispute settlement process and if so, in what areas?

The answer is yes, the United States should push for reform to the WTO dispute settlement process.⁴⁰ In fact, in the negotiations to improve and clarify the Dispute Settlement Understanding, which is taking place in parallel with the Doha negotiations, the United States has put forward some papers and proposals for reforming the WTO dispute settlement process. The topics of the U.S. submissions have concerned improving transparency (*e.g.*, open meetings; timely access to submissions; timely access to final reports; amicus curiae submissions), and improving flexibility to resolve disputes and Members' control over the adoption process.⁴¹

Regarding improving flexibility and Member control, the United States has submitted the following proposals for enhancing dispute settlement:

- (a) making provision for interim reports at the Appellate Body stage, thus allowing parties to comment to strengthen the final report;
- (b) providing a mechanism for parties, after review of the interim report, to delete by mutual agreement findings in the report that are not necessary

³⁸ See Panel Report, *China -- Intellectual Property Rights*, WT/DS362/R, adopted March 20, 2009.

³⁹ Section 7.3 of the Protocol of Accession states: "China shall, upon accession, comply with the TRIMs Agreement, without recourse to the provisions of Article 5 of the TRIMs Agreement. China shall eliminate and cease to enforce trade and foreign exchange balancing requirements, local content and export or performance requirements made effective through laws, regulations or other measures. Moreover, China will not enforce provisions of contracts imposing such requirements. Without prejudice to the relevant provisions of this Protocol, China shall ensure that the distribution of import licences, quotas, tariff-rate quotas, or any other means of approval for importation, the right of importation or investment by national and sub-national authorities, is not conditioned on: whether competing domestic suppliers of such products exist; or performance requirements of any kind, such as local content, offsets, the transfer of technology, export performance or the conduct of research and development in China.." Protocol on the Accession of the People's Republic of China, WT/L/432 (23 November 2001) at Section 7.3 (emphasis added).

⁴⁰ See generally, T. Stewart, A. Dwyer and E. Hein, *Trends in the Last Decade of Trade Remedy Decisions: Problems and Opportunities for the WTO Dispute Settlement System*, 24 Arizona Journal of International and Comparative Law 251, 276 (2007).

⁴¹ The following is a list of the papers submitted by the U.S. in the dispute settlement negotiations to date.

- U.S. submissions regarding improving transparency -- TN/DS/W/13 (22 August 2002); TN/DS/W/46 (11 February 2003); TN/DS/W/79 (13 July 2005); TN/DS/W/86 (21 April 2006).
- U.S. submissions regarding improving flexibility and Member control -- TN/DS/W/28 (23 December 2002); TN/DS/W/52 (14 March 2003); TN/DS/W/74 (15 March 2005); TN/DS/W/82 (24 October 2005); TN/DS/W/82/Add.1 (25 October 2005); TN/DS/W/82/Add.2 (17 March 2006); TN/DS/W/89 (24 October 2005).

- or helpful to resolving the dispute, thus continuing to allow the parties to retain control over the terms of reference;
- (c) making provision for some form of "partial adoption" procedure, where the DSB would decline to adopt certain parts of reports while still allowing the parties to secure the DSB recommendations and rulings necessary to help resolve the dispute;
 - (d) providing the parties a right, by mutual agreement, to suspend panel and Appellate Body procedures to allow time to continue to work on resolving the dispute;
 - (e) ensuring that the members of panels have appropriate expertise to appreciate the issues presented in a dispute;
 - (f) providing some form of additional guidance to WTO adjudicative bodies concerning (i) the nature and scope of the task presented to them (for example when the exercise of judicial economy is most useful) and (ii) rules of interpretation of the WTO agreements.⁴²

Proposal (f), concerning providing further guidance to dispute panels and the Appellate Body, reflects the U.S.' attempt to address the tendency of panels and the Appellate Body (AB) to fill gaps where the agreements are silent or to clarify the meaning of the agreements through interpretation. This tendency has led to the perception that panels and the AB are creating rights and imposing obligations that Members did not negotiate. Neither panels nor the AB possess such authority.

Specifically, the United States has proposed that the following parameters should apply to panels and the AB in dispute settlement proceedings:

**Limitations on the use of public international law
in WTO dispute settlement**

Recognizing that international dispute settlement fora vary regarding the breadth of their adjudicatory authority, WTO dispute settlement under the DSU is focused on the adjudication of rights and obligations under specified agreements. These "covered agreements" are listed in Appendix 1 of the DSU. While other international law might properly play a role in WTO dispute settlement fora, it is not the function of WTO dispute settlement to adjudicate rights and obligations beyond those in the covered agreements.⁴³

**WTO adjudicative bodies are constrained from
adding to or diminishing the covered agreements**

Articles 3.2 and 19.2 of the DSU provide that recommendations and rulings of the DSB "cannot add to or diminish the rights and obligations provided in the covered agreements." This means that WTO adjudicative bodies must take care that any interpretive approach they may use results neither in supplementing nor

⁴² Negotiations on Improvements and Clarifications of the Dispute Settlement Understanding on Improving Flexibility and Member Control in WTO Dispute Settlement, *Contribution by Chile and the United States*, TN/DS/W/28 (23 December 2002) at 2.

⁴³ Negotiations on Improvements and Clarifications of the Dispute Settlement Understanding, *Further Contribution of the United States on Improving Flexibility and Member Control in WTO Dispute Settlement*, *Communication from the United States*, TN/DS/W/82 (24 October 2005) at 6 (emphasis added).

in reducing the rights and obligations of Members under the covered agreements.⁴⁴

The covered agreements reflect differing negotiating objectives and positions

The covered agreements are the result of negotiations among sovereign nations and autonomous customs territories. Negotiations inherently entail a number of compromises. * * *

The differences in approach and perspective also mean that, when interpreting a provision of a covered agreement, while other provisions of the covered agreements may serve as useful context, it is not possible to deduce from the existence of certain provisions that WTO Members have agreed on a particular underlying policy and that this policy may be used as a guideline to interpret other provisions. In other words, it is not appropriate to extrapolate from the fact that Members have agreed to move in a particular direction in one provision and conclude that therefore Members must have intended another provision to move equally in the same direction. * * *⁴⁵

The covered agreements embody constructive ambiguity

* * *

. . . In some circumstances, reaching agreement on the terms of the covered agreements may have necessitated the use of constructive ambiguity in a provision of a covered agreement where the negotiators leave unresolved particular issues by agreeing on language that does not resolve the issue and is capable of more than one interpretation. Constructive ambiguity can serve as a placeholder marking an area where negotiators accept that it may be appropriate to agree on disciplines but where further negotiation is necessary before those disciplines can be specified.

WTO adjudicative bodies are not called to determine if ambiguity is deliberate. Ambiguity is ascertained from an examination of the text. WTO adjudicative bodies will determine whether the meaning of a text is ambiguous after applying the customary rules of interpretation and in light of the evidence and argument presented by the parties to the dispute. There is no separate requirement to establish the intent behind or reason for the ambiguity.⁴⁶

⁴⁴ Negotiations on Improvements and Clarifications of the Dispute Settlement Understanding, *Further Contribution of the United States on Improving Flexibility and Member Control in WTO Dispute Settlement, Communication from the United States, Addendum*, TN/DS/W/82/Add.1 (25 October 2005) at 1 (emphasis added).

⁴⁶ Negotiations on Improvements and Clarifications of the Dispute Settlement Understanding, *Further Contribution of the United States on Improving Flexibility and Member Control in WTO Dispute Settlement, Communication from the United States, Addendum*, TN/DS/W/82/Add.1 (25 October 2005) at 2 (emphasis added).

Gap filling

In light of the nature of the covered agreements, there are at least two ways in which "gaps" in a covered agreement could be unacceptably filled, other than through negotiation.

First would be to read into the text of a covered agreement an obligation or right that is not present in the text, for example by extrapolating from a different provision.

Second would be to resolve ambiguity in the text of a covered agreement in a manner that supplements or diminishes rights and obligations under the covered agreement.

Neither type of "gap filling" is an appropriate function for WTO adjudicative bodies. Rather, the function of WTO adjudicative bodies is to resolve disputes over obligations undertaken, not to substitute for negotiators and re write, reduce or supplement the agreed text.

With respect to the first type of gap filling, there have been several instances in which the Appellate Body has found that a panel has gone beyond the terms of a covered agreement and imputed obligations that were not present in the text. The Appellate Body has correctly found that this is cause for overturning panel findings. It is important to respect the limits of the agreement negotiated. A Member signing a covered agreement indicates by its signature that it is agreeing to the text of that agreement. The Member is not indicating its acceptance to go beyond the text of that agreement.

Similarly, prior reports of WTO adjudicative bodies are not covered agreements. They do not themselves represent agreed text. Accordingly, it is not appropriate to treat or interpret a prior report as though it is agreement text or to use a prior report to add to or diminish rights and obligations under a covered agreement.

With respect to the second type of gap filling, where the application of the customary rules of treaty interpretation leaves the meaning of a provision ambiguous, e.g., there may be two plausible meanings, a WTO adjudicative body should not use that language as the basis for validating a claim or a defense where that validation would require foreclosing one of those meanings.

WTO Members have agreed that the WTO dispute settlement system is not to add to or diminish the rights and obligations under the covered agreements. They have not agreed to delegate to WTO adjudicative bodies the task of filling in gaps in the covered agreements.⁴⁷

Order of analysis

Article 3.4 of the DSU provides that: "Recommendations and rulings made by the DSB shall be aimed at achieving a satisfactory settlement of the matter in

⁴⁷ Negotiations on Improvements and Clarifications of the Dispute Settlement Understanding, *Further Contribution of the United States on Improving Flexibility and Member Control in WTO Dispute Settlement, Communication from the United States, Addendum, TN/DS/W/82/Add.1* (25 October 2005) at 2-3 (emphasis added).

accordance with the rights and obligations under this Understanding and under the covered agreements." Accordingly, the purpose of the dispute settlement system is not to produce reports or to "make law," but rather to help Members resolve trade disputes among them.

WTO adjudicative bodies should avoid making findings that are not aimed at resolving the dispute. * * *⁴⁸

While the U.S. should be commended for proposing that the Members consider establishing parameters regarding “gap filling” and providing interpretation guidance, the U.S. has not, to date, followed up with specific proposals for textual changes to the DSU. And, inasmuch as the chairman’s text in the DSU negotiations is not publically available, it is not known whether the U.S. suggestions regarding “gap filling” and textual interpretation have been incorporated into a draft DSU text. It is essential that the United States continue to forcefully pursue its suggested reforms in negotiations at the WTO with concrete textual proposals, in particular the establishment of express guidance and parameters restraining dispute panels and the AB from creating rights and imposing obligations that Members did not negotiate by engaging in clarifying the meaning of the negotiated agreements through “gap-filling” and interpreting textual ambiguity. It should be made clear that such creative interpretation overreaches the authority provided to the panels and the AB.

In the context of the Doha Rules negotiations, the United States has identified the standard of review in Article 17.6 of the Antidumping Agreement (ADA) as an area that requires clarification. If clarified as the U.S. has suggested, it would help to correct the dispute settlement problems of “gap filling” and creation of non-negotiated rights and obligations. Specifically, the U.S. proposed that Article 17.6 of the ADA, which provides a special standard of review applicable to dispute settlement proceedings concerning antidumping measures, should be addressed by the Members to ensure that it is properly applied by panels and the AB.⁴⁹ Article 17.6 provides (i) that if an antidumping authority’s evaluation of the facts is unbiased and objective, it shall not be overturned even if the panel would have reached a different conclusion, and (ii) that if a panel finds that the relevant provision of the ADA permits of more than one permissible interpretation and the authority’s measure rests on one of those permissible interpretations, the measure shall be found to be in conformity with the Agreement. Despite these provisions, however, no adopted panel or Appellate Body decision has ever found that there is more than one permissible construction. Indeed, the AB has determined that essentially no term in the Antidumping Agreement is capable of more than one conflicting construction.⁵⁰ The U.S. has also suggested that a standard of review provision similar to ADA Article 17.6

⁴⁸ Negotiations on Improvements and Clarifications of the Dispute Settlement Understanding, *Further Contribution of the United States on Improving Flexibility and Member Control in WTO Dispute Settlement, Communication from the United States, Addendum*, TN/DS/W/82/Add.2 (17 March 2006) at 1 (emphasis added).

⁴⁹ Communication from the United States, *Further Issues Identified Under the Anti-Dumping and Subsidies Agreements for Discussion by the Negotiating Group on Rules*, TN/RL/W/130 (June 20, 2003) at para. 7.

⁵⁰ See, e.g., Appellate Body Report, *US – Continued Zeroing*, WT/DS350/AB/R, adopted February 19, 2009, at paras. 265-75, 312.

should be specifically extended to the Agreement on Subsidies and Countervailing Measures (ASCM).⁵¹ The U.S. explained its suggested clarifications as follows:

The ADA negotiators explicitly recognized that there were a number of issues and details that were not included in the ADA. For example, the ADA contains a number of general obligations but leaves Members flexibility on the precise means by which to implement those obligations in practice. One value of Article 17.6 is to help ensure that panels not mandate one particular method of implementation where an authority's alternative method is based on a permissible interpretation of the ADA. Thus, Article 17.6(ii) expressly contemplates that provisions of the ADA may be susceptible to more than one permissible interpretation, and provides that authorities' determinations that rest on any one of those permissible interpretations should not be overturned.

If Article 17.6 is observed and applied properly, in concert with Articles 3.2 and 19.2 of the Dispute Settlement Understanding, then that will help the WTO dispute settlement system to respect the balance of commitments inherent in the ADA and not operate so as to impose upon Members obligations to which they did not agree. However, in connection with aspects of several recent cases, the United States believes that panels and the Appellate Body have not accepted reasonable, permissible interpretations of the ADA. In some cases, these bodies have used general terms in the Agreement to extrapolate what the Agreement would have said about a particular issue if Members had explicitly considered it and agreed upon specific provisions to address the issue.

In addition, panels and the Appellate Body have reached the unwarranted conclusion that applying customary rules of interpretation of international law results in a single permissible interpretation of most provisions of the ADA. This approach is at odds with the underlying premise of Article 17.6. Article 17.6(ii) explicitly contemplates that it is to be expected that applying customary rules of interpretation will admit of more than one permissible interpretation. To the extent that the approach of panels or the Appellate Body renders Article 17.6(ii) a nullity, then that approach is itself inconsistent with the customary rules of interpretation.

Regardless of their position on the substantive issues, all Members should be concerned by dispute settlement findings that disregard provisions agreed to by Members during negotiations. Members should consider whether Article 17.6 should be addressed to ensure that panels and the Appellate Body properly apply

⁵¹ Communication from the United States, *Further Issues Identified Under the Anti-Dumping and Subsidies Agreements for Discussion by the Negotiating Group on Rules*, TN/RL/W/130 (June 20, 2003) at para. 7. In one case, the AB ruled that ADA 17.6 did not apply to countervailing duty cases even though a Ministerial Declaration to the Uruguay Round agreements supported application of the ADA standard of review to the ASCM. See Appellate Body Report, *US – Lead and Bismuth II*, WT/DS138/AB/R, adopted June 7, 2000, at paras. 49, 51; *Declaration on Dispute Settlement Pursuant to the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994 or Part V of the Agreement on Subsidies and Countervailing Measures*: “Ministers recognize, with respect to dispute settlement pursuant to the Agreement on Implementation of Article VI of GATT 1994 or Part V of the Agreement on Subsidies and Countervailing Measures, the need for the consistent resolution of disputes arising from anti-dumping and countervailing duty measures.”

it. Members should also consider whether a provision similar to Article 17.6 of the ADA should be included in the ASCM.⁵²

Again, it commendable that the U.S. has raised the issue of clarifying the proper application of the standard of review in AD and CVD disputes, but, as with the U.S. suggestion regarding “gap filling” in the DSU negotiations, the U.S. has not, to date, followed up with specific proposals for textual changes to the ADA or ASCM. Nor has either of the chairman’s texts in the Rules negotiations (TN/RL/W/213 and TN/RL/W/236) reflected any change to ADA Article 17.6. It is essential that the U.S. pursue this issue in the Doha negotiations with the submission of concrete textual proposals to clarify the standard of review in both the ADA and the ASCM. To this end, the U.S. should propose that the ADA and ASCM be clarified to expressly provide that their special standards of review supplant any other standard of review. Also, the U.S. should propose that Article 11 of the DSU (regarding the function of panels) be revised to contain a specific reference to the precedence of the special standards of review in the ADA and ASCM applicable to the review of antidumping and countervailing measures.

The fourth question from the Commission is:

4. Are U.S. efforts to deal with dumping and subsidies used by China hampered or helped by our WTO membership, and how?

One would think that the answer to this question would be “helped”. Certainly the fact that China is now a member of the WTO and has undertaken various WTO commitments should reduce the pressure on trading partners from economic behavior that was supported in part by high tariffs or non-tariff barriers that have been addressed through China’s accession.

However, WTO membership also provides every member with the right to challenge application of trade remedies by a trading partner for consistency with the ADA, ASCM or Agreement on Safeguards. As one of the major architects of the WTO and of the three agreements, the U.S. should be well positioned to enforce its rights and to defend its actions in WTO disputes.

Because the dispute settlement system has shown an extraordinary complainant bias in outcomes (some violation is found in roughly 90% of all disputes going to decision) and because the Appellate Body has not limited itself to the language of the agreements themselves as reviewed above, one can also say that the WTO’s dispute settlement process potentially undermines the ability of the U.S. to deal with dumping and subsidization. Indeed, the institutional bias in favor of complainants actually encourages Members that were unsuccessful in achieving modifications in agreements during the Uruguay Round to seek, through panel or AB interpretation, a *de facto* modification in the agreements not accepted by their trading partners.

China is presently seeking to alter the balance of rights and obligations with its challenge of the right of the U.S. to pursue both antidumping and countervailing duty cases against its products. China requested a panel challenging the outcome of the Department of Commerce’s (DOC) antidumping and countervailing duty determinations in four investigations; the panel should

⁵² Communication from the United States, *Further Issues Identified Under the Anti-Dumping and Subsidies Agreements for Discussion by the Negotiating Group on Rules*, TN/RL/W/130 (June 20, 2003) at para. 7.

issue its interim decision at any time.⁵³ In that case, China is claiming that the various DOC determinations were inconsistent with the Antidumping Agreement and/or the Subsidies and Countervailing Measures Agreement, including the claim that the U.S. failed to provide legal authority for DOC to avoid the imposition of a double remedy when it imposes antidumping duties determined pursuant to the NME methodology simultaneously with the imposition of countervailing duties on the same product.

If the WTO dispute system finds for China, we will have the very bizarre situation of China being given greater rights than other trading partners by not being subject to both antidumping and countervailing duty investigations. Hopefully that will not happen, but stranger things have happened in the WTO dispute settlement system. Indeed, WTO membership is not helping the United States maintain strong and effective trade remedies.

This problem could and should be cleared up by resolving the problems of overreaching by panels and the AB, and reforming the DSU to clearly prescribe the scope and role of the panels and AB with respect to gap filling and interpretation of the agreements. Correspondingly, the special standard of review set out in Article 17.6 of the ADA should be extended to the ASCM and both agreements expressly clarified to provide that their special standard of review is the only standard applicable to the analysis of antidumping and countervailing measures, and Article 11 of the DSU should expressly provide that the special standards of review in the ADA and ASCM are the only standards of review applicable to antidumping and countervailing measures.

The fifth question from the Commission is:

5. Do you believe we can use our unfair trade laws (anti-dumping and countervailing duty) to counter China's underpriced currency and if we do so can that usage withstand WTO scrutiny?

Economists are in broad agreement that China's currency is substantially undervalued, by as much as 40% according to some estimates. China's currency undervaluation provides an unfair competitive advantage to its exporters by artificially increasing the cost of U.S. exports and decreasing the cost of Chinese goods imported into the United States. The consequences of this undervaluation have been the massive and persistent U.S. trade deficit with China, elimination of important export opportunities, harsh competition for domestic producers from unfairly low-priced imports, and the loss of production, income, and employment in the United States.

In answer to the Commission's question, yes, I believe that the United States can use its antidumping or countervailing duty laws to address the unfair advantage provided to imports from China by virtue of its underpriced currency. My view is not mere speculation. Indeed, the GATT and WTO Agreements, as well as U.S. law, have long recognized that government-

⁵³ See DS379 – Definitive Anti-Dumping and Countervailing Duties on Certain Products from China. China is challenging the following four investigations: *Circular Welded Carbon Quality Steel Pipe from China* (A-570-910 and C-570-911); *Certain New Pneumatic Off-the-Road Tires from China* (A-570-912 and C-570-913); *Light-Walled Rectangular Pipe and Tube from China* (A-570-914 and C-570-915); *Laminated Woven Sacks from China* (A-570-916 and C-570-917).

managed exchange rates can confer countervailable subsidies on exports or can constitute a form of dumping.

Long before the GATT, importing countries resorted to trade remedies to address currency practices of governments in exporting countries. A large number of countries in the 1920s and 1930s had antidumping legislation to address exchange dumping.⁵⁴ And, in the United States, more than 70 years ago, the Treasury Department countervailed currency schemes where an incentive to export was created. For example, in the 1930s, Germany regulated and controlled its currency by maintaining different categories of reichsmarks with different conversion values. By regulation, Germany allowed the lower-valued reichsmarks to be used for the purchase of German goods to be exported. The German exporter, however, could redeem the lower-valued marks at the rate of the higher-valued marks. This practice led the Treasury Department to issue Treasury Decision 48360 in June 1936, which stated:

Notice is hereby given that pursuant to the provisions of section 303 of the Tariff Act of 1930, countervailing duties equal to any bounty and/or grant found to have been paid and/or bestowed will be collected on articles of the kinds named below from Germany....

Treasury's decision was upheld by the courts:

- *F.W. Woolworth Co. v. United States*, 115 F.2d 348 (CCPA 1940):

{T}o the {German} manufacturer one of the reichsmarks paid from the registered reichsmark account was worth the same as one of the marks paid from the free reichsmark account. (At 352)

* * *

It is not possible to escape the conclusion from the record that the German Government by various devices and through different authorized governmental agencies was seeking to aid its manufacturers in invading foreign markets with their goods to compete in such markets with domestic producers. * * * Among such was the control of the registered marks and the limitations placed upon their use.

* * *

As has been said, concededly a bounty would have followed the payment of the total purchase price in free marks. It seems clear that, since the registered marks which were used became immediately worth the same to the manufacturer as free marks, the identical ultimate result on dollars and cents was obtained. In the one instance a direct bounty would have been paid; in the other the result was reached indirectly. (At 353)

- *V. Mueller & Co. v. United States*, 115 F.2d 354, 360 (CCPA 1940) (“We are of the opinion that the presumption of correctness attaches to this finding.”).
- *Robert E. Miller & Co., Inc. v. United States*, 34 CCPA 101, 102-103, 105 (1946):

⁵⁴ See generally *Antidumping Legislation and Other Import Regulations in the United States and Foreign Countries - Report Prepared for the Federal Trade Commission by the Export Trade Section of the Commission Relative to Antidumping Legislation and Other Import Regulations in the United States and Foreign Countries*, S. Doc. No. 112, 73d Cong., 2d Sess. 9-13 (1934).

The imported goods were paid for on April 10, 1937, in Aski marks which were purchased at a lower price than the current value of free or gold reichsmarks. Aski marks were of the class of currency which, under German regulation, could be used in payment for exported goods and subsequent to such use were redeemed by the German Government at the same value as free reichsmarks thereby enabling the German manufacturer to dispose of his exported goods at a “dollar-equivalent” less than would otherwise be charged.

* * *

It is not denied that the transaction placed the imported merchandise in the “bounty-fed” class.

When the GATT was adopted in 1948, the Contracting Parties included a note to Article VI (“Antidumping and Countervailing Duties”) that recognized that countervailing duties or antidumping duties could be used to address “multiple currency practices” that constituted either export subsidies or a form of dumping.

GATT Ad Article VI
Paragraphs 2 and 3

2. Multiple currency practices can in certain circumstances constitute a subsidy to exports which may be met by countervailing duties under paragraph 3 or can constitute a form of dumping by means of a partial depreciation of a country's currency which may be met by action under paragraph 2. By "multiple currency practices" is meant practices by governments or sanctioned by governments.

In 1958, the GATT Secretariat studied the application of antidumping and countervailing duties by the Contracting Parties. In reviewing the types of measures that involve subsidization, the study referenced the Ad Note to Article VI:

A special type of low price import may also be mentioned in this connexion, namely those which are the consequence of currency measures taken in the exporting country. While in most such instances the price comparison will not permit the levy of an anti-dumping duty, GATT expressly permits the levy of countervailing duties in circumstances where the exportation of the product is facilitated by a multiple currency system (Note to Article VI). A case in which such a provision has been applied is the imposition of a countervailing duty by the United States on imports of wool tops from Uruguay.

GATT, Anti-Dumping and Countervailing Duties (July 1958) at 11.

The study further noted: “Concerning countervailing duties, the United States has indicated that these are used to offset all types of export subsidization, including subsidization through differential exchange rates.” *Id.* at 13. As noted in the GATT study, in May 1953, as a result of a multiple exchange rate system maintained by Uruguay, the U.S. Treasury Department issued a notice of countervailing duties on imports of wool tops from Uruguay. T.D. 53257, 88 Treas. Dec. 105; 18 Fed. Reg. 2653 (May 7, 1953).

Upon appeal, the Customs Court upheld T.D. 53257, stating:

Under this statute, it has been held that multiple exchange rate systems can result in a bounty or grant.

* * *

It has also been recognized internationally that multiple currency practices can in certain circumstances constitute a subsidy to exports which may be met by countervailing duties. Interpretative Notes to the General Agreement on Tariffs and Trade, ad Article VI...

* * *

In our opinion, the facts presented here support the Treasury Department's finding that, at the time of its decision, wool tops exported from Uruguay received bounties or grants within the meaning of section 303 of the Tariff Act of 1930.

One of the purposes of Uruguay's multiple rate of exchange system was to aid industries which needed assistance in order to place products abroad. Under such a system, which assigns different exchange rates to different commodities, some exports are favored over others. In the instant case, the record shows that wool tops were favored over many other commodities and that the manufacturer was enabled to sell them to the United States profitably, which he could not otherwise have done. * * * By means of the exchange rate granted to wool tops, an inducement was offered for the exportation of wool in the form of tops rather than in the form of unmanufactured wool. The result was to increase seriously the importation of wool tops into this country from Uruguay and to permit their sale at lower prices in competition with domestically produced wool tops.

Energetic Worsted Corp. v. United States, 224 F. Supp. 606, 612-614 (Cust. Ct. 1963).⁵⁵

Moreover, the Illustrative List of Export Subsidies in Annex I to the WTO Agreement on Subsidies and Countervailing Measures (as well as in the 1979 Subsidies Code) prohibits both “currency retention schemes and any similar practices which involve a bonus on exports” (item (b)), and the government provision of “exchange risk programmes, at premium rates which are inadequate to cover the long-term operating costs and losses of the programmes” (item (j)). A government’s currency retention scheme would allow its exporters to retain foreign-exchange earnings rather than exchange them for local currency. According to item (b), a government’s use of such a scheme to provide a “bonus on exports” would be a prohibited export subsidy.

Thus, there is both past precedent and current authority in the Ad Note to Article VI of the GATT 1994 to use trade remedy laws (either antidumping or countervail) to address the injurious effects of various currency practices, including undervaluation.

Although I believe that U.S. unfair trade laws can be used to address China’s underpriced currency, whether such an action would withstand a WTO challenge is a separate question.

Should it withstand WTO scrutiny? – Clearly, yes. As reviewed above, the GATT Agreement recognizes that various currency practices are reachable through antidumping or anti-subsidy provisions.

⁵⁵ Upon review by the Court of Customs and Patent Appeals, the decision of the Customs Court was reversed, but the CCPA did so because it found that Treasury’s “procedure” in determining a weighted benchmark was not appropriate. *Energetic Worsted Corp. v. United States*, 53 CCPA 36, 45-46 (1968).

Whether it would withstand WTO scrutiny, however, is difficult to predict. Statistically, complainants in dispute cases at the WTO are successful about 90% of the time. This means that whenever a Member's action is challenged at the WTO, it is highly likely that a violation to some degree will be found by a dispute panel or the Appellate Body. Given that some past dispute panels and the AB have engaged in "gap filling," have interpreted textual ambiguity to foreclose otherwise permissible constructions, and have defined terms by selecting relevant definitions as the "only" permissible construction regardless of the number of other definitions for the same word,⁵⁶ it cannot be ruled out that a WTO challenge by China to a U.S. antidumping or countervailing duty measure that addressed China's currency undervaluation could result in a finding of a WTO violation – but that result is not a certainty and is certainly not required by the existing WTO rights and prior consistent constructions by the U.S. and other members.

The possibility of a WTO challenge, however, should not deter the legitimate application of U.S. trade remedy laws to address China's currency undervaluation, and should not be an excuse for not taking warranted action.

The sixth, and final, question from the Commission is:

6. Is the WTO an adequate instrument to deal with trade problems presented by China's industrial policy?

The answer is partly yes, and partly no. Some trade problems can be addressed and resolved through the WTO if the trading partners involved have the will to do so. Take, for example, the problem of China's export restraints. Some flow from China's industrial policies aimed at dominating certain fields and barring foreign competition. To the extent that China has taken on specific obligations, such as in Annex 6 of its accession protocol which provides a defined list of products that China may subject to export duties, then those types of problems should be addressable through the WTO.

The problem of currency misalignment is an issue that is not being addressed by the International Monetary Fund (IMF) but which could be addressed by the WTO (see answer to Q. 5).

On the other hand, the system does not work well in addressing problems posed by state-owned enterprises (SOEs) which continue to be important economic players in China and continue to provide serious concerns to trading partners about distortions to trade flows.

Nor can the WTO deal with issues that are not part of the WTO agreements either for individual countries (e.g., government procurement) or more generally (e.g., investment rules; etc.). Because the Government Procurement Agreement (GPA) remains a plurilateral agreement,

⁵⁶ See T. Stewart, A. Dwyer and E. Hein, *Trends in the Last Decade of Trade Remedy Decisions: Problems and Opportunities for the WTO Dispute Settlement System*, 24 *Arizona Journal of International and Comparative Law* 251, 276 (2007): "The reality is that when there are seven or more definitions of a word used in an agreement, the decision to choose one definition over the others may flow more from a results-oriented exercise of discretion than from contextual constraints and, at a minimum, raises concerns about adherence to the requirements of Article 17.6 and about an institutional bias against the use of WTO-consistent measures."

Members can choose not to join and, to the extent such non-GPA Members create obstacles to existing GPA member participation, the WTO cannot resolve the problems. So far, China has not joined the GPA although it committed to do so as soon as possible after accession. China, which applied for accession to the GPA and submitted an initial offer in December 2007, has delayed joining, which results in continued denial of access to its procurement regime. At the May 2010 S&ED, “China agreed to submit a robust revised offer by July 2010 to join” the GPA.⁵⁷

Also, issues of investment policy, except in some service sectors, are not within the compass of the WTO. As a result, investment problems are not generally resolvable by the WTO.

Strangely, the WTO is not necessarily an effective forum to address even flagrant WTO violations where WTO members are unable to gather the factual support needed because of company concerns of retaliation or punishment if they stand up for rights they should have based on WTO agreements.

Conclusion

The United States has talked about the need to rebalance the economic system to address massive surpluses and deficits. China’s beggar-thy-neighbor policies compound the challenges faced by the U.S. and other countries in reestablishing balance in the system.

While it is not unusual for major trading partners to have occasional disputes, such disputes typically revolve around different interpretations of rights or obligations where no obvious answer is included in the agreements themselves (while this is not always the case, it is often the case). This has not been the situation in disputes with China. For example, in the case of export restraints on raw materials, one must assume that China’s restrictive actions are motivated by a desire to back track on clear commitments they undertook in joining the WTO, or, alternatively, they are an effort to buy time for their local industries to fortify positions before complying with obligations to open markets. It is also possible they are intended to force foreign investment in certain sectors in China before removing WTO-inconsistent actions. Whatever the motivation, China’s mercantilist policies flout the bedrock WTO principles of national treatment and MFN.

Admitting China to the WTO was a great experiment – no other country with such a large economy had been brought into the WTO before it was ready. The challenges for China to change its system to one that would operate relatively consistently with other WTO Members have been large and the will for such change has seemingly faltered if not retreated. What is clear is that the future vitality of the WTO will depend on whether the U.S. and China and other major trading partners can ensure basic compatibility and a fundamental respect for not only the letter but also the spirit of the agreements and a willingness to adjust the system to achieve a sustainable structure. The first nine years of China’s membership do not suggest that we are headed in a sustainable direction.

⁵⁷ See Dept. of Treasury, *Second Meeting of the U.S.-China Strategic & Economic Dialogue, U.S. Fact Sheet – Economic Track*; <http://www.ustreas.gov/initiatives/us-china/S&ED-2010-Fact%20Sheet.pdf>.

APPENDIX

WTO Cases Brought by the U.S. Against China

No.	Title	Request for Consultations	Panel Report	Appellate Body Report
DS309	Value-Added Tax on Integrated Circuits (Semiconductors)	March 18, 2004	Mutually-agreed solution October 6, 2004	
DS340	Measures Affecting Imports of Automobile Parts	March 30, 2006	July 18, 2008	December 15, 2008
DS358	Certain Measures Granting Refunds, Reductions or Exemptions from Taxes and Other Payments	February 2, 2007	Mutually-agreed solution December 17, 2007	
DS362	Measures Affecting the Protection and Enforcement of Intellectual Property Rights	April 10, 2007	January 26, 2009; adopted March 20, 2009	NA
DS363	Measures Affecting Trading Rights and Distribution Services for Certain Publications and Audiovisual Entertainment Products	April 10, 2007	August 12, 2009	December 21, 2009
DS373	Measures Affecting Financial Information Services and Foreign Financial Information Suppliers	March 3, 2008	Mutually-agreed solution December 4, 2008	
DS387	Grants, Loans and Other Incentives (Famous Brands)	December 19, 2008	Mutually-agreed solution December 18, 2009	
DS394	Measures Related to the Exportation of Various Raw Materials	June 23, 2009	Panel established December 21, 2009; Report expected October 2010

Attachment 1

The tables that follow present a comparison of Compound Annual Growth Rates for the following:

- China's Imports at the HTS Chapter level for Imports from the World, the United States and All Other Sources for the periods 1995 to 2000, 2001 to 2007, 2001 to 2008, and 2001 to 2009. (Note that Underlined values indicate that the Compound Annual Growth Rate ("CAGR") for China Imports from All Other Sources (2001-2009) exceeds the CAGR for China Imports from the U.S. (2001-2009)).
- U.S. Exports at the HTS Chapter level for Exports to the World and to China for the periods 1996 to 2000, 2001 to 2007, 2001 to 2008, and 2001 to 2009. (Note that Underlined values indicate that the Compound Annual Growth Rate ("CAGR") for U.S. Exports to the World (2001-2009) exceeds the CAGR for U.S. Exports to China (2001-2009)).

		China's Imports											
		Imports from the World				Imports from the United States				Imports from All Other Sources

Notes: Underlined values indicates that the Compound Annual Growth Rate ("CAGR") for China Imports from All Other Sources (2001-2009) exceeded the CAGR for China Imports from the U.S. (2001-2009)
Underlined values indicates that the Compound Annual Growth Rate ("CAGR") for U.S. Exports to the World (2001-2009) exceeded the CAGR for U.S. Exports to China (2001-2009)

Attachment 2

The tables that follow present a comparison of Compound Annual Growth Rates for the following:

- China's Imports at the HTS 4-digit heading level for Imports from the World, the United States and All Other Sources for the periods 1995 to 2000, 2001 to 2007, 2001 to 2008, and 2001 to 2009. (Note that Underlined values indicate that the Compound Annual Growth Rate ("CAGR") for China Imports from All Other Sources (2001-2009) exceeds the CAGR for China Imports from the U.S. (2001-2009)).
- U.S. Exports at the HTS 4-digit heading level for Exports to the World and to China for the periods 1996 to 2000, 2001 to 2007, 2001 to 2008, and 2001 to 2009. (Note that Underlined values indicate that the Compound Annual Growth Rate ("CAGR") for U.S. Exports to the World (2001-2009) exceeds the CAGR for U.S. Exports to China (2001-2009)).

China's Imports
